CAREER OBJECTIVE

Results-driven Flutter Developer with experience in end-to-end mobile application development, including UI design, state management, REST API integration, and performance optimization. Proven experience working on enterprise-level projects such as Workforce Management and government applications. Strong foundation in software development and committed to delivering reliable, user-friendly mobile solutions.

TECHNICAL SKILLS

- **Problem solving**, Flutter development, Dart programming, API integration
- UI design, collaboration, Mobile application maintenance, User experience optimization
- Team collaboration, Firebase, Android Studio, Adaptability, Communication
- MVVM, Cross-functional teamwork

EXPERIENCE

Flutter Developer

03/2024 – Current

Tecdatum · Hyderabad

- Developed and maintained a WFM (Workforce Management) mobile application using Flutter for employee operations.
- Implemented automatic attendance tracking after user login, including employee check-in and check-out features.
- Built leave management and employee activity tracking modules, with real-time status updates.
- Integrated REST APIs for authentication, attendance, and employee data management.
- Contributed to the TGFIRE project, focusing on UI development, API integration, and performance optimization.
- Flutter Development: Proficient in building scalable and maintainable mobile applications using Flutter.
- Dart Programming: Skilled in the Dart programming language for developing Flutter applications.
- Collaborated with designers to create user-friendly interfaces and experiences.

PROJECTS

Workforce Management (WFM) Application

Flutter, Dart, REST APIs, MVC/MVVM, Firebase

- Developed a Workforce Management mobile application to manage employee attendance and daily activities.
- Implemented automatic attendance marking upon employee login, reducing manual effort and errors.
- Built leave management features including apply, approve, and track leave status.
- Integrated REST APIs for authentication, attendance, and employee data retrieval.
- Designed responsive UI and optimized app performance for smooth user experience.

TGFIRE – Fire Incident & Emergency Response Management

Flutter, Mobile Application, GIS/Maps,

Real-time Tracking, REST APIs

- Developed TGFIRE, a mobile-based fire incident and emergency response management system.
- Implemented incident reporting with live location details, instantly notifying the Command & Control Room.
- Built a dispatch management system to assign and send fire vehicles to incident locations.
- Integrated real-time vehicle tracking to monitor fire engines en route to emergencies.
- Displayed nearby water bodies and resources on maps to assist fire teams during operations.
- Implemented map-based visualization for incidents, vehicles, and emergency resources.
- Improved response time and coordination between field teams and the control room.

MyHydraa – Government Emergency Response Application

Flutter – Live Tracking – Dispatch – REST API

- Engineered a vehicle dispatch and emergency response platform enabling smart allocation of the nearest available unit to live incidents.
- Built complaint registration, dispatch management, and multi-stage issue resolution workflows with image uploads and higher-authority approval chains.
- Implemented vehicle history tracking and real-time condition monitoring modules, providing operational transparency across the government fleet.

EDUCATION

B.Sc

GPA: 82%

Krishnaveni Degree College – Narasaraopet

Intermediate

GPA: 84%

Vagdevi Junior College – Narasaraopet

SSC

GPA: 95%

Sindhu High School – Narasaraopet
